

AUGUSTIN MUYL

+1 (786) 616-2355 | muyl.augustin@gmail.com | github.com/augustinmuyl | linkedin.com/in/augustinmuyl

Education

University of Michigan

Ann Arbor, MI

Bachelor of Science | Majors: Honors Mathematics, Computer Science

May 2028

- **Relevant Coursework:** Real Analysis, Abstract Algebra, Combinatorics, Linear Algebra, Data Structures & Algorithms
- **Activities:** New Wave Capital (Quant Analyst), Quantitative Investment Society (Quant Dev)

Miami Dade College

Miami, FL

Associate of Arts, Mathematics

May 2026

- **GPA:** 4.0/4.0 | Phi Theta Kappa

Skills

- **Languages:** Python, C++, TypeScript, Java, SQL, Bash
- **Technologies:** PyTorch, NumPy, Pandas, scikit-learn, FastAPI, React, PostgreSQL, Snowflake, Docker, Git, Linux

Experience

Machine Learning Intern

May 2026 – Aug 2026

Detect Inspections | Computer Vision

Miami, FL

- Deployed a YOLO11s damper detector at **0.99 F1** on a self-annotated **5,250+ box** dataset with containment-based NMS
- Surfaced **75+ field-confirmed** slid/missing dampers missed by standard classifiers via rotation-invariant line geometry
- Raised DINOv3 cross-view re-ID from **0.63 to 0.88 AUC** on 2,500+ pairs by redesigning the embedding readout

Data Science Intern

May 2025 – Aug 2025

CMA CGM | Group Security & Intelligence

Marseille, France

- Cut processing of **800M+ container logs** from **~20 hrs to <1 hr** by rebuilding Snowflake ETL and tuning SQL, enabling near-real-time risk screening
- Shipped React/FastAPI features for an investigations platform used daily by **50+ analysts on 5 continents**
- Inferred shippers' origin zones at **75%+ accuracy** with an H3 algorithm that filters hubs/ports and rebuilds routes

Undergraduate Researcher

Sep 2025 – May 2026

Miami Dade College | Spectral Graph Theory

Miami, FL

- Built a Python simulator of Laplacian spectral robustness under random, degree, betweenness, and Fiedler attacks
- Showed Kirchhoff index predicts giant-component size under random removal (**r = 0.98**) but degrades under targeted attacks (**r = 0.76**); proxies must match the threat model

Software Engineer

Feb 2025 – May 2025

Iperuranium | Frontend

Boston, MA

- Led frontend for core pages (TypeScript, Tailwind, Framer Motion), reworking sign-up flows at drop-off points

Projects

Vocatio | [\[website\]](#) [\[github\]](#)

Oct 2024 – Feb 2026

- Built and led a full-stack platform (Next.js, FastAPI, PostgreSQL) matching students to nonprofit roles
- Developed search/filter/pagination APIs, validated CSV bulk import, and bot-protected waitlist onboarding
- Selected for the Innovate@BU First-Year Innovation Fellowship (**\$1,000** funding + mentorship)

MLP-NumPy | [\[github\]](#)

Jul 2025

- Implemented an MLP from scratch in NumPy with hand-derived backprop, early stopping, and a training CLI
- Reached **98%** on MNIST and **89%** on Fashion-MNIST

Languages

- French (native), Spanish (native), English (fluent)
